## CAPRICORN CHRISTCHURCH DISPLAY NIGHT

### Merry Christmas from all the staff at J E Paisley

Once again another year has come to a close. We would like to thank our valued customers for your continued support over the last twelve months. We will also take this opportunity to wish you, your family and staff a happy Christmas and prosperous new year.

Thanks to everyone who visited our display stand and entered our competition. The Paisley stand was awarded the best stand prize for the night.

Congratulations also to the door and stand competition winners.

We look forward to seeing Capricorn members at the road shows in Nelson, Greymouth and Timaru next February

### Free Freight and Lollies

This is the fifth issue of the Paisley news. Since its inception, we have endeavored to make this a quarterly newsletter to help us keep in touch with you our valued customers. In it we have tried to feature tips and technical information that may be of interest to those in the automotive industry. While we don't intend to turn this into "another sales" flier, we want to take this opportunity to highlight a few handy items in order to give an insight into some of the many products we carry in stock apart from the normal glow plugs and filters at competitive prices.

### Exchange pumps Available for

VP44 fitted to Nissan—MAN—Isuzu — Cummins

Japanese pumps available for WL Mazda - Ford Courier—4M40 Mitsubishi - Toyota 1HD T

Nissan Covic TD27Ti

Others available, ring us for details with the vehicle model and engine type

**New: Available soon**

Replacement head for **Isuzu - Mitsubishi**. Will fit Nissan when used with a Z304 filter

Replacement **Toyota** filter head

Alloy one way valves available in 8mm — 10mm and 13mm  
These valves should only be fitted after the main filter too prevent dirt entering valve.

One way valve with filter screen suitable for installation before the main filter, available in 8mm and 10mm  
Can be disassembled and cleaned.

Bulk tank filter with drain

## Latest Racor water absorbing fuel filter.

The Racor dispensing filters start protecting engines at the source, removing virtually 100% of contaminants from diesel or petrol, including water, dirt, rust and biological micro-organisms. Racor fuel dispensing filters offer protection down to 10 microns. Flow rates range from 15 to 100 GPH with a maximum operating pressure 100 psi. These filters feature a super-absorbent, chemically treated media with two unique features:

- 1/ the filter media absorbs 25 times its weight in water and locks it in. It is an effective barrier against free and emulsified water.
- 2/ as the media swells with water removed from the fuel, it gradually reduced the flow rate signalling the need to replace the filter. The absence of a bypass valve ensures the fuel system will be completely protected.
