Racor filtration, Simply the best protection against water and other contaminates

460R 227 litres hr

230R 114 liters hr

Alarm kits available for the 230 and 460 filter units for early warning of water entry. These filters should be fitted before the vehicle manufacturer's filter.

Bulk tank units

Start protecting your investment at the source. Racor's Fuel Dispensing Filters are essential for stationary and overhead tanks, marinas and mobile service vehicles. With their easy to install heads, they remove virtually 100% of the contaminants from diesel fuel. Racor elements feature a super absorbent, chemically treated media that absorbs 25 times its weight in water, "locking it in" as a barrier against free and emulsified water. As this media swells, it reduces the flow rate, eventually shutting it off and signaling a need to replace the element. The absence of a bypass valve ensures fuel is completely protected. Racor offers filter protection down to 25 microns. Flow rates range from 15 to 100 gpm. Element service is clean and easy - there's no cartridge to replace - just spin on a new Racor filter element.
